JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

III. *Observations upon the Comet, that appear'd in October 1723, made at Bombay; and upon an Eclipse of the Moon, Oct. 21, 1724, at Gomroon in Persia. By Mr. William Saunderfon. Communicated by Dr. Halley, Astron. Reg. R. S. S.*

Bombay, Sept. 12, 1725.

IN the Month of *October 1723*, being riding at *Bombay*, a Brightness in the Heavens appear'd to a Right Line, for but very little to the Eastward of one) with *Lyra* and the Bright Star in the *Eagle*, being about 50° distant from the last; and on *Monday the 7th* following it had advanced 10° toward the *Eagle*, moving towards it in the forementioned direction, from the S. E. Quarter. I took the following Distances between 9 and 10 at Night, as in this Table.

<i>October.</i>		Dist. from the	
Days.		<i>Eagle's Heart.</i>

} South

At first it looked only like one of the White Spots called the *Magellanic Clouds*, the Space filling the Field
F f of

of a Six-foot Glafs. Afterwards I ſaw the Head in the Center of the illuminated Space, which did not look with much Brightneſs; but appeared largeſt on the 10th of *October*, decreaſing gradually both in its Bulk and Motion from that time until the 25th, at which time I could find no Appearance of it with the fore-mentioned Glafs. *N. B.* From the 20th to the 25th it had nearly the ſame Place in the Heavens, ſeeming to move directly from the Earth. *October* the 21ſt, 1724, being at *Gomroon* in *Perſia*, the Moon entered into the dark Shadow or *Umbra*, of the Earth at 11^h 33^m paſt 5 A. M.
